SpliceCom's PCS 5 Desktop Phone

For many businesses the analogue telephone still has a significant role to play and is likely to for many years to come - support for this type of phone in addition to IP handsets is one of maximiser's many strengths. Developed for SpliceCom to meet the traditional telephony needs demanded of an analogue **maximiser** phone, the PCS 5 is the ideal entry-level phone. Easy to use, with four feature keys, the PCS 5 can be further energised through "partnering" SpliceCom's PCS 50.

Supplied as standard with every **maximiser** system, the PCS 50 application for Windows, Mac OS X and Linux PCs, when used in conjunction with the PCS 5, delivers ALL of the benefits associated with SpliceCom's top of the range PCS 400 and PCS 200 desktop stations. Phone calls can be dialled as normal from the PCS 5 keypad, or made via the PCS 50 application from PC keyboard or via the mouse. Access to speed dials/busy lamp field/direct station select, system directories, messaging, visual call pick-up and call progress are all provided in exactly the same manner as the PCS 400/200. Even the "push" of web enabled information to the user desktop from the company Intranet, IP Video Servers and Web Cams and other web enabled applications is easily achieved.

The stylish design of the PCS 5, combined with its reliability - with or without the PCS 50 - make it the ideal choice for those companies looking for a low-cost handset to complement the enhanced features and facilities delivered by SpliceCom's Proactive Communication Stations. As such, the PCS 5 is the answer to the large number of companies who want all the benefits of an advanced business telephone system like maximiser, but need to keep their costs down.

SpliceCom - Understanding Your Business

In the world of Business Telephony, SpliceCom are unique. Being a UK company ourselves, we fully understand your needs - because we share them with you. We have developed the **maximiser** and Proactive Communication Station accordingly. Between us, the SpliceCom team have enjoyed many years of major success in developing, launching, selling and supporting voice and data products for companies that include Case Communications, Racal Milgo, Bay Networks (now Nortel Networks), 3Com, Network Alchemy, Rocom, SDX Business Systems, Lucent Technologies and Avaya. SpliceCom's management team have proven track records in the leadership of several successful technology companies, developing market leading products and managing profitable growth, having sold over 35,000 telephone systems that remain in everyday use. You can find out more about SpliceCom, the **maximiser**, and Proactive Communication Stations by visiting www.splicecom.com
